

CUSTOMERFLOW

Full Stack Development Studio

customerflow.work · hello@customerflow.work · github.com/waqasmani · Remote / Worldwide (UTC+5)

THE STUDIO

CustomerFlow is a full stack development studio with 8+ years of experience designing, building, and operating production web platforms - multi-tenant SaaS, e-commerce with custom checkouts, purpose-built CRMs, and high-throughput APIs. We own outcomes end to end: honest scoping, clean architecture, measured results, and infrastructure that stays boring after launch.

WHAT WE DO

Full Stack Development	Web applications built end to end - schema to interface to deployment pipeline
SaaS Platforms	Multi-tenant architecture, billing, dashboards, and provisioning that scales
E-Commerce	Headless storefronts, custom checkouts, and configurators where speed sells
CRM & Business Systems	Internal platforms shaped around how your company actually works
API Development	Typed REST contracts, rate limiting, webhooks, and high-throughput ingestion
Performance & Infrastructure	Nginx, Docker, PM2, Cloudflare - fragile hosting made boring and monitored

CORE STACK

Frontend	Next.js, React, TypeScript, JavaScript, Tailwind CSS, Vue.js
Backend	Node.js, Express, Fastify, REST APIs, Authentication, WebSockets / SSE
Databases	PostgreSQL, MariaDB, MySQL, Prisma, Redis - schema design & query tuning
Cloud & DevOps	Linux, Ubuntu, Docker, Nginx, Cloudflare (+R2), GitHub Actions, PM2

SELECTED WORK

Northwind Ops

Multi-tenant SaaS

Operations platform for a wholesale distributor: 7 warehouses live, 92% less stock drift, tenants provisioned in minutes instead of weeks.

Vela Commerce

E-commerce

Headless storefront with a custom deposit-aware checkout: +34% checkout conversion and 1.4s LCP on mobile, down from 6.2s.

Pulse API

High-throughput API

Analytics ingestion rebuilt to sustain 38M events/day on two VPS nodes at 78% lower infrastructure cost than the serverless MVP.

Atlas CRM

Business systems

Freight CRM with a multi-leg quoting engine: quote turnaround cut from 2 business days to 2 minutes, 100% sales-team adoption.

HOW WE WORK

Scope honestly (surprises belong in week one), ship iteratively (working software on a staging URL every week), measure everything (performance budgets and conversion events, not vibes), and document as we go (the next engineer should sleep well). Clients own their code, repos, and infrastructure from the first commit.
